Things We Have Built

At Neda Communications, Inc., we are not just abstract theoreticians. In addition to our intellectual leadership within the data communications industry we have also implemented our ideas in the form of real-world engineering constructs. Among our most significant contributions to the Internet Services and wireless industries are:

- A Libre Services. Libre Services are an extension of the principles of free software into the Internet Services domain-they are Internet Services that can be freely cop ied and reproduced by anyone.
- **By* Family**. The By* family of Libre Services is a coherent framework for enabling complex interactions among people, businesses and information.
- The WhiteBerry mobile messaging solution. Based entirely on patent-free protocols and open-source software, WhiteBerry represents the future of the mobile messaging industry.

Each of these concepts is a visionary idea for the future of the Internet Services and wireless industries. Together, the Libre Services and By* models have enormous implications. The Libre Services development model, and the By* unified Internet Services framework, can transform the Internet completely, from the proprietary ad hoc model of today into something far more powerful. We have implemented each of these concepts in the form of actual, working systems. We invite you to visit any of the following websites to learn more and try our creations out for yourself.

Technology	Website	Description
Libre Services	www.LibreServices.org	Under the auspices of the Free Protocols Foundation we have
		written the Libre Services Manifesto to explain and promote
		the Libre Services concept.
By* Family	www.By-Star.net	A coherent, scalable, generalized Internet Services model.
Internet Services	www.ByName.com	Providing integrated computing and communications services
for individuals	www.ByNumber.com	for the individual user, we have created the ByName,
	www.ByAlias.com	ByNumber and ByAlias services. ByMemory is dedicated to
	www.ByMemory.net	preserving the memory of deceased persons.
Internet Services	www.BySMB.com	To meet the needs of the Small-to-Medium Business (SMB)
for businesses	www.ForSMB.com	segment, we have created BySMB/ForSMB.
Internet Services	www.ByWhere.net	Allowing complex interactions among people, businesses,
for locations,	www.ByEvent.com	locations, events and information, we have created the
events, topics,	www.ByTopic.com	ByWhere, ByEvent, ByTopic, and ByInteraction services.
and interactions	www.ByInteraction.com	
Open source &	www.BySource.org	A family of software distribution and resource centers,
free software	www.ByBinary.org	providing everything needed to implement any of the By*
	www.MailMeAnywhere.org	services, or the WhiteBerry messaging solution.
Protocols &	www.LeapForum.org	Providing support for the development and maintenance of
standards	www.ESRO.org	the LEAP family of protocols, we have established the LEAP
	www.EMSD.org	Forum, and the ESRO (for RFC 2188) and EMSD (for RFC
		2524) maintenance organizations. To promote the concept, we
		have written The LEAP Manifesto .
Consulting and	www.neda.com	We provide consulting services to support the deployment of
support services		any of our Internet Services or other technologies.
