Things We Have Built

At Neda Communications, Inc., we are not just abstract theoreticians. In addition to our intellectual leadership within the data communications industry we have also implemented our ideas in the form of real-world engineering constructs. Among our most significant contributions to the Internet Services and wireless industries are:

- **A Libre Services**. Libre Services are an extension of the principles of free software into the Internet Services domain–they are Internet Services that can be freely cop ied and reproduced by anyone.
- **By* Family**. The By* family of Libre Services is a coherent framework for enabling complex interactions among people, businesses and information.
- **The WhiteBerry mobile messaging solution**. Based entirely on patent-free protocols and open-source software, WhiteBerry represents the future of the mobile messaging industry.

Each of these concepts is a visionary idea for the future of the Internet Services and wireless industries. Together, the Libre Services and By* models have enormous implications. The Libre Services development model, and the By* unified Internet Services framework, can transform the Internet completely, from the proprietary ad hoc model of today into something far more powerful. We have implemented each of these concepts in the form of actual, working systems. We invite you to visit any of the following websites to learn more and try our creations out for yourself.

Technology	**Website**	**Description**
Libre Services	www.LibreServices.org	Under the auspices of the Free Protocols Foundation we have written the Libre Services Manifesto to explain and promote the Libre Services concept.
By* Family	www.By-Star.net	A coherent, scalable, generalized Internet Services model.
Internet Services for individuals	www.ByName.com www.ByNumber.com www.ByAlias.com www.ByMemory.net	Providing integrated computing and communications services for the individual user, we have created the ByName, ByNumber and ByAlias services. ByMemory is dedicated to preserving the memory of deceased persons.
Internet Services for businesses	www.BySMB.com www.ForSMB.com	To meet the needs of the Small-to-Medium Business (SMB) segment, we have created BySMB/ForSMB.
Internet Services for locations, events, topics, and interactions	www.ByWhere.net www.ByEvent.com www.ByTopic.com www.ByInteraction.com	Allowing complex interactions among people, businesses, locations, events and information, we have created the ByWhere, ByEvent, ByTopic, and ByInteraction services.
Open source & free software	www.BySource.org www.ByBinary.org www.MailMeAnywhere.org	A family of software distribution and resource centers, providing everything needed to implement any of the By* services, or the WhiteBerry messaging solution.
Protocols & standards	www.LeapForum.org www.ESRO.org www.EMSD.org	Providing support for the development and maintenance of the LEAP family of protocols, we have established the LEAP Forum, and the ESRO (for RFC 2188) and EMSD (for RFC 2524) maintenance organizations. To promote the concept, we have written The LEAP Manifesto .
Consulting and support services	www.neda.com	We provide consulting services to support the deployment of any of our Internet Services or other technologies.
